

LUG SHAFT Series 101

Grippers are slit through the metal pipe and pneumatic bladder is used for inflating. The grippers give positive holding of the core.

These shafts are strong & rigid

Standardized design allow us to manufacture the shaft in any size

The same design can be offered for heavy duty to light capability shaft

Simple design ensuring long service

Staggered lug design makes it best in winding application.

Each gripper offers a designed chamfer for easy core insertion

Dimensional tolerance of journal is very tight for better fitting & rigidity during operation

Material

Pipe : Steel or Aluminum,
Carbon Fiber

Lugs : Steel, Rubber or Plastic

Available Size

Core ID from 3" to 8"

Length up to 6000 mm(240")

Option

Cantilever shaft

Various size of lug (Gripper)
available

Rotary Union air supply possible
